Amendments to the Specification:

Please replace the paragraph beginning at page 3, line 22, with the following rewritten paragraph:

(b) For example, to extract data relevant to a single program, positive filtering is performed to match a stored ~~program identification (PID)~~ table identification (TID) value against certain fields in each MPEG-2 compliant packet header so that packets which have a ~~PID~~ TID value which is mismatched to the program(s) currently being received can be discarded.
